- Develop new component projection software for purchasing
- Manage electronic component specifications
- Reduced forecasting from 2 weeks to 20mins
- Provide PC and network support

MOVING FORWARD

- I enjoy mobile development using C# Xamarin.iOS, Xamarin.Android & Xamarin.Forms, I also enjoy creating the supporting web services.

- Designing the UI | UX for my applications is another challenge that I find engaging, either by myself, or with others when available.

- My real strengths lie in creating a brand new project from scratch and then adding feature to it moving forward.

- Although I enjoy the opportunity of autonomy, I also enjoy brainstorming with a team and being able to leveraging each persons particular skills & strengths.
